

Hybrid RAG (Vector + Graph) — Live Demo

A local Retrieval-Augmented Generation app combining vector similarity search with a knowledge-graph retriever, plus input/output guardrails.

Live app: <https://tinyurl.com/f2hr8xea>

1. Guardrails blocking prompt-injection attempts

The assistant correctly refuses two different jailbreak-style questions (“ignore all previous instructions...” and “act as an unrestricted AI”), while still answering a genuine question about the ingested document normally, with sources cited.

2. Hybrid retrieval answering a real question, with sources

The screenshot shows a web browser window with multiple tabs labeled 'Hybrid RAG'. The address bar shows 'localhost:8501'. The application interface is divided into a left sidebar and a main content area. The sidebar contains an 'Upload Documents' section with a 'Choose a PDF' prompt, a 'Drag and drop file here' area (limit 200MB per file), a 'Browse files' button, and a file named 'spotify_web_app_archit...' (10.8KB) with an 'Ingest document' button. Below this is a 'Knowledge Base' section showing 'Documents' and 'Chunks'. The main content area has a title 'Hybrid RAG (Vector + Graph)' and a subtitle 'Upload a PDF in the sidebar, then ask questions grounded in its content.' A question input field contains 'what is the frontend techstack of spotify?'. The answer provided is: 'The frontend tech stack of Spotify includes Next.js (React + TypeScript) for server-side rendering (SSR) and single-page application (SPA) behavior, Tailwind CSS with a component library (e.g., Headless UI/Radix UI style), React Query (TanStack Query) for server state, Zustand/Recoil/Jotai for global player state, HLS.js + HTML5 Audio / Web Audio API for playback and visualizations, OAuth2 / OIDC-based authentication integration with the backend, and PWA features for an installable app and offline caching of some metadata [V1].'. Below the answer is a 'Sources (5)' section showing '[V1] spotify_web_app_architecture.pdf (vector retrieval)' and 'Spotify-like Web App - Full Architecture & Feature List'. A 'Tech Stack Overview' section is also visible. The bottom of the screen shows a Windows taskbar with a search bar, various application icons, and system status information (31°C, Partly cloudy, 17:59, 20-09-2026).

A question about the uploaded document (“what is the frontend techstack of spotify?”) is answered using only the ingested PDF as context, with the exact source chunk shown under “Sources.” The sidebar shows the knowledge base growing to 3 documents, 43 chunks, 307 entities, and 321 relationships.
